

POLYMER FINISH

Description and advantages

SURFACE:

Ultra-resistant «gelcoat» polyester resin, +/- 25 mil thick, like the one used in the manufacturing of boat hulls.

INTERIOR:

Strong and homogenous, 3/8 to 1 inch thick composite materials.

* Dramatic changes of temperature, from very hot to very cold, can damage the product and limit the warranty.

COLORS AND FINISHES

Available in Vanico-Maronyx, Kohler, American Standard and Eljer colors.

Finishes: Unimar (high gloss) or satine (matte finish).

ADVANTAGES:

- Smooth surface with a pleasant feeling.
- Long-lasting brilliance.
- Non-porous and stain resistant material.
- Shock resistant.
- Easy to care: Clean with a soft cloth and a non-abrasive bathroom cleaner. Never use abrasive creams or powders.

ONE-PIECE VANITY TOP: - A more elegant look and easier to clean.
- The lack of joints helps prevent mildew.

BATHTUB: - The water stays warm much longer thanks to the thermal effect.
- The material's thickness helps muffle the noise of the air or whirlpool systems.
- Polymer allows for a more refine looking exterior finish.

SHOWER PAN: - Insulating material that **muffles the noise of pounding water.**
- The shower pan gives a feeling of sturdiness (no swing effect).

For shower wall panels

EXTERIOR FINISH

Same polyester resin (a) with the same characteristics and advantages than polymer (see page 1).

Additional advantages

- Its water repellent characteristics eliminate the need to install expensive *Duroc* sheets that are required with ceramic walls. So it can be installed directly on less expensive gypsum boards (except if your local building codes requires the *Duroc* sheets.)
- Very few joints compared to tiled surfaces, so fewer joints that dirty or change color.

5-year limited warranty

INTERIOR:

Panel formed of two layers of fiberglass (b) sandwiching a sheet of closed cell rigid polyurethane foam (c) to prevent water absorption.

Advantages:

- Insulating material that **muffles the noise of pounding water**.
- Both flexible and strong, it is **exceptionally resistant to impacts**.
- High strength, low weight, which facilitates both handling and installation.
- Weighing approximately 1 lb/sq.ft.: it is **50% lighter** than conventional polymer panels.

COLORS AND FINISHES

Available in Vanico-Maronyx colors and the Kohler, American Standard and Eljer colors.

Unimar (high gloss) or satine (matte finish).
